Alex Rowan

Backend engineer

Manchester, UK | Contact details omitted from this fictional sample

Profile

I am a backend engineer working in payments. I work on payment services, migrations and production support. I use Python and Java and work with product and engineering colleagues.

Skills

Python, FastAPI, Java, PostgreSQL, AWS, RabbitMQ, Git and automated testing.

Experience

Senior Backend Engineer | Example Payments

July 2022 - present

Responsible for microservices and helping with the migration project. I owned three payment services in a five-person team. The team moved them off the legacy queue over two years, from 2022 to 2024, without a customer-facing outage, and I led that work.

My work also includes API development in Python and FastAPI, PostgreSQL queries and automated tests. I review changes with product colleagues before release.

I take part in the on-call rota and write runbooks for incident investigation and service recovery. I work with engineers on release plans and rollback checks.

Backend Engineer | Example Commerce

September 2019 - June 2022

Worked on order processing in Java and helped with support tickets. This involved investigating failed orders and fixing defects with the customer support team.

Added integration tests for the order API and documented its endpoints for the frontend team.

Education

BSc Computer Science | Example University | 2016-2019
